

Continuity™ Advance

Protect your investment and keep your critical care devices ready to go for patient care

Continuity Advance prepares your fleet for a changing environment

The last few years have changed the healthcare environment, with many professionals having to cover more ground and do more with less. Continuity Advance is your way of keeping GE HealthCare products protected, working well, and up-to-date so you can keep your devices ready to go and patient care uninterrupted.

Continuity Advance protects your investment

Your GE HealthCare devices are built with both cutting edge software and hardware, but the rapid pace of innovation and rise in cyber attacks mean your investment can quickly become outdated or vulnerable. Mitigating device vulnerability should be a top priority for healthcare facilities.

Managing software and hardware can be time-consuming and costly, so we've created an easy way to keep devices secure and up-to-date so they can always be ready to go when patients need them.

When you stay current with upgrades, it makes individual updates small and less time consuming. It also keeps your ecosystem at the forefront of technology so it will be compatible with future device purchases.

Here's what's included:

- Software updates and OS patches
- Software and/or hardware base system upgrades
- Clinical software and/or hardware base system upgrades
- Installation labor, if required
- Available for a duration of 3 years
- Technical and Clinical Applications Training (available as an add on)

Ensure your systems continue to provide you with excellent, reliable service for the future

Tracking technology is time consuming, and your resources are best focused on delivering top-notch care. Continuity Advance lets you leave the future forecasting to us. We'll make sure that your GE HealthCare investment continues to provide you with excellent, reliable service today, tomorrow and in the days to come, while helping you achieve these goals:

Elevated system protection

- Safeguard patient data and your institution with a multi-layer approach to anti-virus protection.
- Ward off obsolescence when your system stays supported by a current OS

Improved return on investment

- Simplify your budgeting process and improve asset and fleet planning capabilities with predictable and lower upgrade costs.
- Enjoy the financial flexibility of choosing to use CapEx or OpEx
- Avoid large unexpected equipment replacement costs
- Experience uninterrupted operations of your critical systems and process as your existing fleet remains compatible with future equipment purchases

Optimized device performance

- Ensure your OS is current and able to receive all clinical software updates which include the latest clinical enhancements which can lead to shortened exams and a better overall patient experience
- Scheduled updates can help you ensure higher uptime, faster processing and performance and optimal device availability
- Continual updating helps you maximize your system's life cycle

Heightened staff confidence and capability

- Our engineers and our remote and on-site technicians are here to help support your team so they can focus on care delivery
- With access to technical and clinical applications training, your staff can hone skills and broaden their expertise, helping you standardize care within your facility (available as an add on)
